1 Introduction

1.1 Background

A (hypothetical) client is interested in opening new bakeries in three different cities: New York City, Chicago and Toronto. Three cities are different and it would be very difficult to make decisions regarding where to open new bakeries without thorough knowledge on these cities. However we found that a data driven decision making process can help this client decide which neighbourhoods would be the good candidates to open new ones.

1.2 Business Problem

Three decision criteria were identified as an initial step.

- Location considerations
- Baked goods considerations
- Unique considerations

For example, rent expense will be a part of location considerations and the client's speciality item will be a part of baked goods considerations. Unique considerations will include all client-specific constraints (for example, tax considerations). These will be not a part of our problem since they won't deliver homogeneous results based on dataset.

Our main decision criteria come from Foraging Theory¹. Among many implications from Foraging Theory, we found two are especially relevant to our research. According to the theory,

1. food outlet is bunching to capture efficiency (location consideration)
2. sensory-specific satiety (i.e. the allure of variety, colour)

The second implication can be analysed as bakeries offering variety of items such as coffee shop, café, juice bar, bubble tea shop and donut shop. Therefore, we focused on finding:

1. neighbourhood where more bakeries are located (from the first implication)
2. neighbourhood where more coffee shop, café, juice bar, bubble tea shop and donut shop are located (from the second implication)

1.3 Interest

We expect this analysis will help not only this hypothetical client but also people who are interested in opening bakeries (or even coffee shops) in NYC, Chicago and/or Toronto.

¹More details can be found here: https://en.wikipedia.org/wiki/Optimal_foraging_theory

2 Data

2.1 Data Sources

2.1.1 Wikipedia

Wikipedia was used as our data source to grab neighbourhood data, which includes neighbourhood location and borough and/or postal code. Note that Chicago does not have borough unlike New York City or Toronto. Therefore, we used Community Areas instead.

- New York City: we will use [newyork_data.json](#) file
- Toronto: https://en.wikipedia.org/wiki/List_of_postal_codes_of_Canada:_M
- Chicago: https://en.wikipedia.org/wiki/List_of_neighborhoods_in_Chicago

2.1.2 Foursquare

We used Foursquare as our main data source.

2.2 Data Preparation

2.2.1 New York City

We decided to focus on Manhattan rather than including all suburbs to make our exercise simpler. We did not much to do as a preparation of data here since json file is already well arranged.

2.2.2 Toronto

As we did in our previous exercise, we decided to analyse Toronto borough and neighbourhoods only if borough information exists. That means, we deleted data, which does not have borough information. And we aggregated neighbourhood to the same column using join.

2.2.3 Chicago

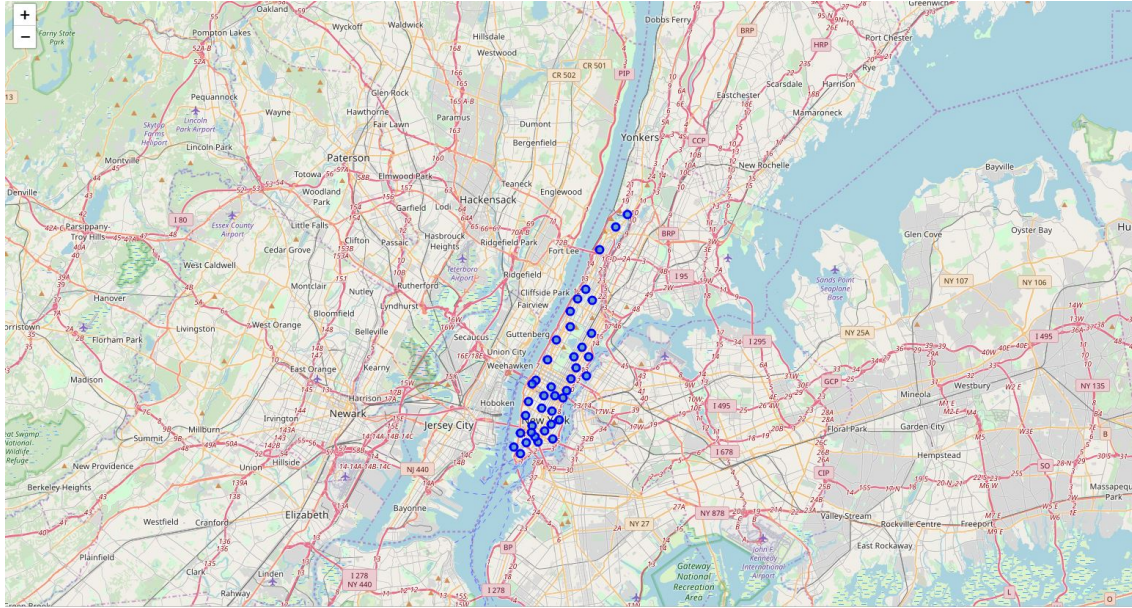

We gathered community area and neighbourhood data from Wikipedia saved it in a spreadsheet format. We also included geospatial information as well since reading location data had a problem in the Toronto exercise. Again, similar to Toronto data, we aggregated neighbourhood data to the same column using join.

3 Methodology

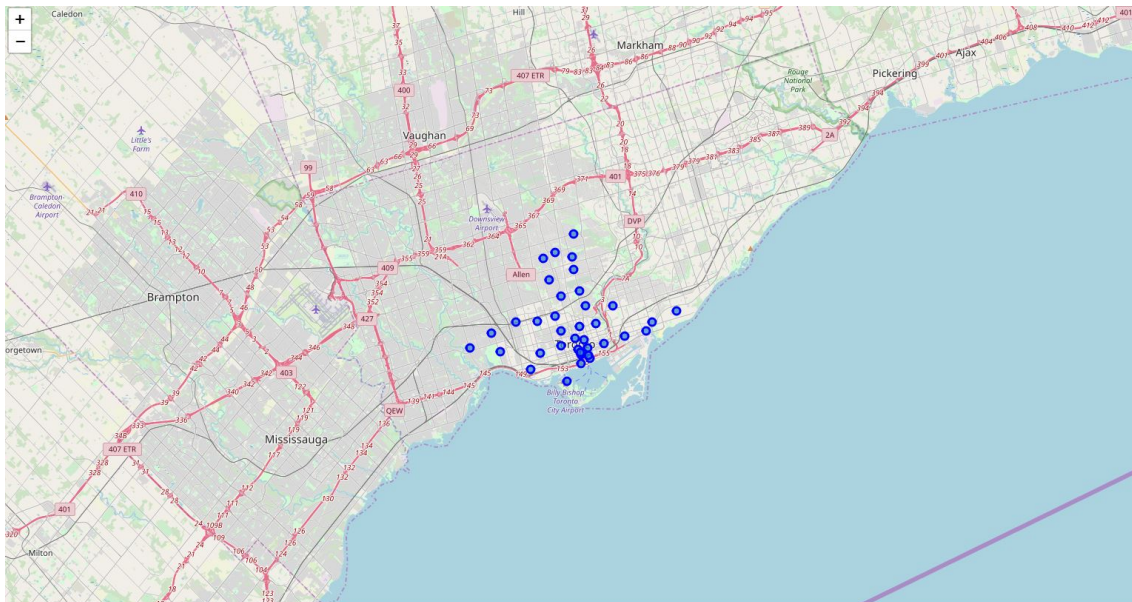

3.1 Neighbourhood Map

To identify where neighbourhoods are located, we drew maps for three cities to show neighbourhoods with their geospatial information (i.e. latitude and longitude).

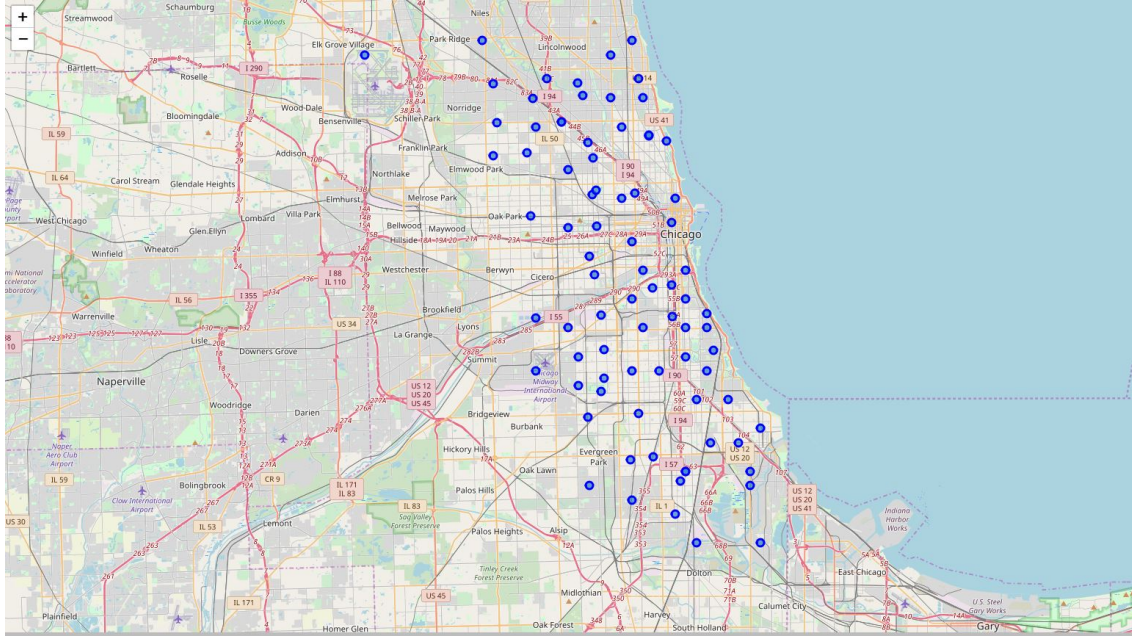

3.1.1 Manhattan

3.1.2 Toronto

3.1.3 Chicago

Note that we used Manhattan data for New York City and boroughs containing Toronto data only (i.e. boroughs containing Toronto) for Toronto data. However, since we only found less than 100 Chicago Community areas and community areas are scattered such that it is more difficult to set a criterion to make the dataset size smaller, we decided to use all Chicago community areas for this analysis.²

3.2 Reading Foursquare Data

For each city, we read Foursquare Data using Foursquare API. The data fields we called using a user defined function are Venue, Venue Latitude, Venue Longitude and Venue Category³.

3.3 Analysing Each Neighbourhood

We grouped dataset by neighbourhood and by taking the mean of the frequency of occurrence of each category to determine which venue category is more popular in each neighbourhood. We, then, summarized the analysis into one table including top 10 most common venues in each neighbourhood. At this stage, we can select which neighbourhoods are good to open new bakery shops.

The following tables display the first five neighbourhood results.

²Manhattan data has 40 different boroughs, Toronto data has 38 boroughs and Chicago has 82 community areas.

³The customized function also calls neighbourhood, neighbourhood latitude and neighbourhood longitude.

3.3.1 Manhattan

	Neighbourhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
0	Battery Park City	Park	Coffee Shop	Hotel	Gym	Wine Shop	Shopping Mall	Italian Restaurant	Fountain	Burger Joint	Pizza Place
1	Carnegie Hill	Pizza Place	Coffee Shop	Café	Cosmetics Shop	Grocery Store	Bar	Spa	French Restaurant	Bookstore	Yoga Studio
2	Central Harlem	African Restaurant	Chinese Restaurant	Cosmetics Shop	American Restaurant	Seafood Restaurant	Gym / Fitness Center	French Restaurant	Ethiopian Restaurant	Bar	Library
3	Chelsea	Coffee Shop	Italian Restaurant	Ice Cream Shop	Nightclub	American Restaurant	Bakery	Seafood Restaurant	Theater	Hotel	Market
4	Chinatown	Chinese Restaurant	Dim Sum Restaurant	Bubble Tea Shop	American Restaurant	Vietnamese Restaurant	Cocktail Bar	Noodle House	Hotpot Restaurant	Salon / Barbershop	Bar

3.3.2 Toronto

	Neighbourhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
0	Adelaide, King, Richmond	Italian Restaurant	Sushi Restaurant	French Restaurant	Clothing Store	Boutique	Seafood Restaurant	Café	Indian Restaurant	Bakery	Chinese Restaurant
1	Berczy Park	Coffee Shop	Sandwich Place	Hotel	Japanese Restaurant	Bar	Italian Restaurant	French Restaurant	Spa	Gym	Bakery
2	Brockton, Exhibition Place, Parkdale Village	Korean Restaurant	Hotel	Hotel Bar	Cosmetics Shop	Coffee Shop	Japanese Restaurant	Italian Restaurant	Cocktail Bar	Boutique	Bakery
3	Business Reply Mail Processing Centre 969 Eastern	Bar	Playground	Park	German Restaurant	Pet Service	Harbor / Marina	Farmers Market	Cocktail Bar	Coffee Shop	Helipoint
4	CN Tower, Bathurst Quay, Island airport, Harbo...	Italian Restaurant	Pizza Place	American Restaurant	Bagel Shop	Cocktail Bar	Bar	Mexican Restaurant	Thrift / Vintage Store	Coffee Shop	Grocery Store

3.3.3 Chicago

	Neighbourhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
0	Albany Park, Mayfair, North Mayfair, Ravenswoo...	Coffee Shop	Discount Store	Donut Shop	Tennis Stadium	Big Box Store	Supplement Shop	Shoe Store	Seafood Restaurant	Sandwich Place	Yoga Studio
1	Andersonville, Edgewater, Edgewater Beach, Edg...	Italian Restaurant	Cosmetics Shop	New American Restaurant	Gastropub	Wine Bar	Jazz Club	French Restaurant	Bakery	Park	American Restaurant
2	Archer Heights	Chinese Restaurant	Dim Sum Restaurant	Bubble Tea Shop	American Restaurant	Vietnamese Restaurant	Cocktail Bar	Noodle House	Hotpot Restaurant	Salon / Barbershop	Bar
3	Armour Square, Chinatown, Wentworth Gardens	Café	Bakery	Mobile Phone Shop	Grocery Store	Mexican Restaurant	New American Restaurant	Sandwich Place	Park	Supplement Shop	Supermarket
4	Ashburn, Ashburn Estates, Beverly View, Crestl...	Mexican Restaurant	Café	Pizza Place	Lounge	Bakery	Deli / Bodega	Park	Restaurant	Chinese Restaurant	Spanish Restaurant

3.4 k -Means Clustering

Finally, we ran k -means clustering to check what other neighbourhoods show similar characteristics as our selection once we select the neighbourhoods in three cities.

The following maps display city maps with neighbourhoods in coloured clusters.

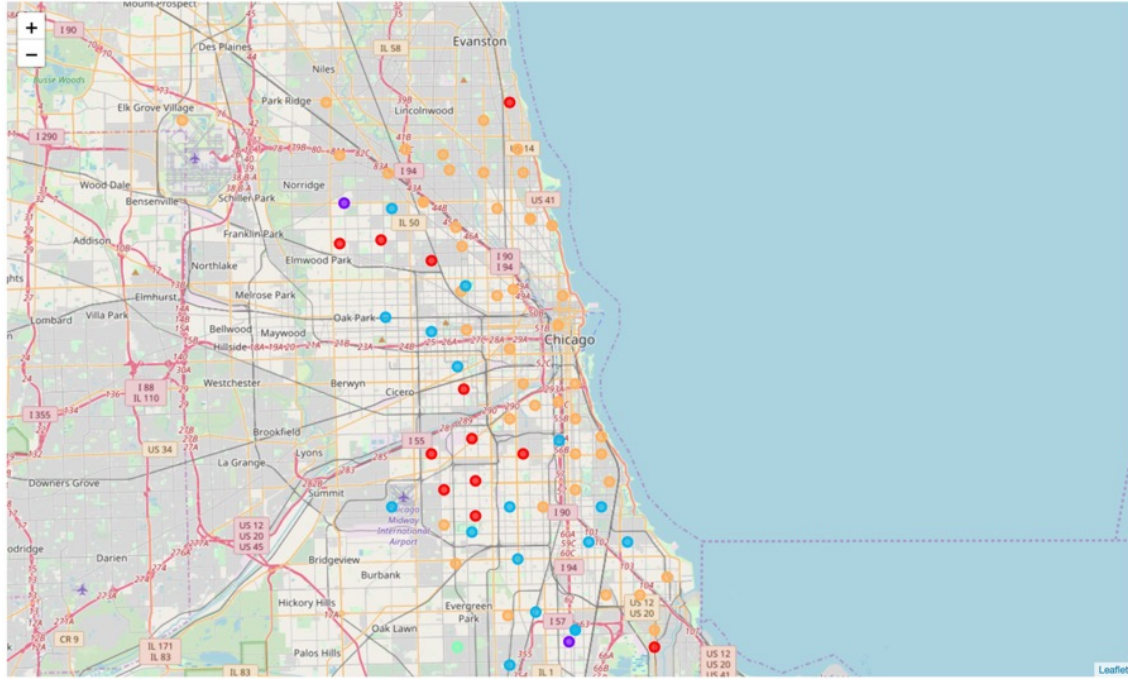

3.4.1 Manhattan

3.4.2 Toronto

3.4.3 Chicago

3.5 Neighbourhood Selection

We ranked neighbourhood by applying following equation⁴.

Let's denote 10 most popular venues matrix by M . We will also denote Bakery by B, Coffee shops/Café/Bubble tea by C, Juice bar by J, and Donut shop by D⁵.

$$Score = [\mathbf{1}_B(M) \times 4 + \mathbf{1}_C(M) \times 3 + \mathbf{1}_J(M) \times 2 + \mathbf{1}_D(M) \times 1] \times \begin{bmatrix} 10 \\ 9 \\ \vdots \\ 1 \end{bmatrix} \quad (1)$$

We ranked the result to come up with neighbourhood recommendation.

4 Result

4.1 Manhattan

	Borough	Neighborhood	Latitude	Longitude	Cluster Labels	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
22	Manhattan	Little Italy	40.719324	-73.997305	1	Bakery	Café	Seafood Restaurant	Sandwich Place	Bubble Tea Shop	Chinese Restaurant	Clothing Store	Salon / Barbershop	Mediterranean Restaurant	Ice Cream Shop

⁴We will select neighbourhood(s) in each city, which have most bakeries (weight = 4), coffee shops, café and bubble tea shop (weight = 3), juice bar (weight = 2) and donut shop (weight = 1). We will also give weights from 10 to 1 with respect to 1st most common venue to 10th most common venue.

⁵ $\mathbf{1}_A(x)$ is an indicator function. If $x \in A$, it is 1; otherwise 0.

It seems that the best neighbourhood in Manhattan to open a new bakery shop is Little Italy. Considering Italian culture where people appreciate good coffee and bread, this is not a surprising result. The first most common venue is bakery followed by café.

4.2 Toronto

PostalCode	Borough	Neighbourhood	Latitude	Longitude	Cluster Labels	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue	
13	MSA	Downtown Toronto	Harbourfront, Regent Park	43.65426	-79.360636	0	Coffee Shop	Bakery	Park	Café	Pub	Theater	Breakfast Spot	Restaurant	Mexican Restaurant	Bank

Harbourfront/Regent Park were ranked as the best neighbourhood to open a new bakery shop. It shows coffee shop and bakery as the first two venues followed by park and café. Since there have been new coffee shops opening in that neighbourhood, it is also as expected⁶.

4.3 Chicago

	Community Area	Neighbourhood	Latitude	Longitude	Cluster Labels	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
36	Hyde Park	East Hyde Park, Hyde Park	41.794446	-87.593924	2	Sandwich Place	Coffee Shop	Yoga Studio	Bakery	Bookstore	Bubble Tea Shop	Shopping Mall	Shipping Store	Café	Rental Car Location

Hyde Park has the highest ranking among all neighbourhood. Hyde Park is where the University of Chicago is located. Many students often go to café/coffee shop to study. If a new bakery store has good seating area serving coffee or tea as well, Hyde Park will be a good place to open a new one.

5 Discussion

Although we get the highest ranking neighbourhood in each city, we decided to investigate further to see what other neighbourhoods have similarities with this highest ranking neighbourhood. In section 3.4, we already performed the k -means clustering for this purpose.

5.1 Cluster Analysis

The following tables summarize the list of neighbourhoods, which are in the same category as the highest ranking neighbourhood.

⁶It is close to Leslieville, which is a desirable neighbourhood for young professionals. It is also quite close to downtown core.

5.1.1 Manhattan

	Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
1	Chinatown	Chinese Restaurant	Dim Sum Restaurant	Cocktail Bar	American Restaurant	Vietnamese Restaurant	Bar	Bubble Tea Shop	Noodle House	Hotpot Restaurant	Salon / Barbershop
5	Manhattanville	Coffee Shop	Park	Sushi Restaurant	Italian Restaurant	Mexican Restaurant	Seafood Restaurant	Indian Restaurant	Bus Stop	Lounge	Bike Trail
9	Yorkville	Bar	Gym	Coffee Shop	Italian Restaurant	Pizza Place	Japanese Restaurant	Wine Shop	Deli / Bodega	Diner	Sushi Restaurant
10	Lenox Hill	Italian Restaurant	Coffee Shop	Sushi Restaurant	Gym / Fitness Center	Pizza Place	Sporting Goods Shop	Burger Joint	Gym	Mexican Restaurant	Bakery
12	Upper West Side	Italian Restaurant	Bar	Coffee Shop	Indian Restaurant	Wine Bar	Bakery	Mediterranean Restaurant	Burger Joint	Vegetarian / Vegan Restaurant	Yoga Studio
17	Chelsea	Coffee Shop	Ice Cream Shop	Italian Restaurant	Nightclub	Bakery	Theater	Hotel	American Restaurant	Seafood Restaurant	French Restaurant
18	Greenwich Village	Italian Restaurant	Sushi Restaurant	French Restaurant	Clothing Store	Café	Seafood Restaurant	Bakery	Indian Restaurant	Boutique	Burger Joint
19	East Village	Bar	Wine Bar	Mexican Restaurant	Ice Cream Shop	Vegetarian / Vegan Restaurant	Cocktail Bar	Chinese Restaurant	Coffee Shop	Pizza Place	Ramen Restaurant
20	Lower East Side	Café	Art Gallery	Coffee Shop	Japanese Restaurant	Sandwich Place	Ramen Restaurant	Pizza Place	Cocktail Bar	Chinese Restaurant	Shoe Store
22	Little Italy	Bakery	Café	Seafood Restaurant	Sandwich Place	Bubble Tea Shop	Chinese Restaurant	Clothing Store	Salon / Barbershop	Mediterranean Restaurant	Ice Cream Shop
23	Soho	Clothing Store	Boutique	Women's Store	Men's Store	Shoe Store	Art Gallery	Mediterranean Restaurant	Coffee Shop	Italian Restaurant	Yoga Studio
27	Gramercy	Italian Restaurant	Pizza Place	American Restaurant	Bagel Shop	Cocktail Bar	Hotel	Grocery Store	Thrift / Vintage Store	Mexican Restaurant	Coffee Shop
30	Carnegie Hill	Pizza Place	Coffee Shop	Bar	Café	Cosmetics Shop	Yoga Studio	Spa	Bookstore	French Restaurant	Grocery Store

5.2 Implication

We found that multiple neighbourhoods are similar to highest ranked neighbourhoods in all three cities. Hence, it is recommended to take a look at the neighbourhoods in the same cluster as the highest ranking neighbourhoods. As we discussed in section 1, we did not consider any unique constraints as well as any other exogenous factors. When we decide where to open a new bakery store, these factors should be considered simultaneously. The approach we took here could be a starting point and by applying other constraints and factors, we can reach our ultimate conclusion more effectively and efficiently.

6 Conclusion

We have discussed which neighbourhood we want to choose to open a new bakery store in three cities: Manhattan, Toronto, and Chicago. We used Foursquare data and geospatial data for this purpose. We did not take into account unique circumstances and exogenous factors. We sorted the result from Foursquare with respect to the frequency of venue categories and score them using our ranking function. We, then, found the highest ranking neighbourhood in each city. We further ran k -mean clustering to check what other neighbourhoods belong to the same cluster as the highest ranking cluster. Chicago had only one neighbourhood in the cluster, while Manhattan and Toronto had multiple neighbourhoods in the same cluster. It is important to take a look at other neighbourhoods with unique circumstances as well as exogenous factors (such as rent).

Decision making is not purely quantitative nor purely qualitative. The result is most meaningful and the process is most efficient if we combine both quantitative methodology and qualitative methodology. We believe that the similar approach can be used for the city planning for the municipal government.
